

## EVGA Announces the World's First e-GeForce 6800 GT 512MB Graphics Card

**Brea, California — August 17, 2005** — EVGA, a leading provider of performance computing hardware, today announced the release of their e-GeForce™ 6800 GT 512MB (P/N: 512-P2-N435-AX) NVIDIA® technology-based graphics card. The new graphics card, an EVGA exclusive, will be available through a broad network of leading E-tailers, retailers, systems integrators, OEM system manufacturers and distributors, with a manufacturer's suggested retail price of \$399.99 USD.

The new e-GeForce 6800 GT 512MB, with the inclusion of a single dual-link TMDS connector, has been updated to include support for wide-aspect ratio LCD monitors such as the Apple 30" Cinema Displays. An upgrade to 512MB gives games additional texture leg room while the GF 6800 GT GPU is powerful enough to run the latest games and software.

With its updated features, this new and improved version of the 6800 GT provides for an excellent upgrade path that bridges the gap between the GeForce 6 series cards and the newer GeForce 7800 series. The e-GeForce 6800 GT 512MB, coupled with EVGA's Genuine Spec, new lifetime warranty, and 24/7 phone tech support, figures to be an excellent addition to the GeForce 6 Series Family line of products, and makes this product one of the most attractive GeForce 6800 GT's available today.

### About EVGA

Founded in 1999, EVGA has grown exponentially in the channel, serving the system builder, distribution and retail markets with products that offer the highest in quality and customer satisfaction, thereby making the computing experience transparent to the hardware in the box. EVGA only offers visual processing products based on NVIDIA chipsets and has recently expanded its product line to include motherboards.
