

EVGA introduces EVGA BlackPearl™ Water Cooling Solution

Brea, California and Munich, Germany - October 14, 2005 — EVGA Corporation, the leading edge 3D processor board brand of the United States of America, announced that it expands its product range to offer the EVGA BlackPearl™ WaterCooling solution for its entire EVGA e-GeForce 7800 GTX KO product family.

"EVGA BlackPearl™ water cooling solution is up to 20 times more efficient and almost silent," commented Wolfram, Managing Director and Co-Founder of EVGA Europe. "The advantages of the EVGA Black-Pearl™ water cooling solution are increased 3D performance with higher clock speeds and quiet operation targeting the 3D enthusiasts as well as professionals seeking a noiseless solution for their work place."

The EVGA BlackPearl™ water cooling solution is based on a revolutionary design featuring the world's most reliable Eheim aquarium water pump with an average life of 10 years, while conventional lower cost solutions are using lower quality water fountain pumps which may not even survive the mandatory European warranty period of two years. Equipped with a 400 Watt radiator and a 12 cm low noise fan, the EVGA BlackPearl™ water cooling solution can be extended to both, SLI and to the CPU (Intel or AMD). In order to offer today's most reliable and long lasting water cooling solution EVGA has partnered with innovatek, today's leading manufacturer of liquid cooling solutions, based in Stammham, Germany.

"innovatek are manufacturing high-quality products that fit our needs extremely well", says Hans-Wolfram Tismer. "As innovatek have been in this business since the beginning of "retail" water cooling they know very much about their operation and we are proud to have a partner like this on our side."

"To meet the requirements of the leading manufacturer of high performance 3D graphics and home entertainment accelerators is a great challenge for us", says Markus Husterer, Managing Director of innovatek OS GmbH. "As pioneers of the whole H₂O movement we are sure that this co-operation is another important step in the way of bringing the benefits of water cooling to every user."

First products will be available in October 2005 – press samples are available upon request. The EVGA e-GeForce 7800 GTX KO "Black Pearl™" with 256 MB will be priced at a recommended retail price of € 899.

About EVGA

Founded in 1999, EVGA has grown exponentially in the channel, serving the system builder, distribution and retail markets with products that offer the highest in quality and customer satisfaction, thereby making the computer experience transparent to the hardware in the box. EVGA only offers visual processing products based on NVIDIA chipsets and in year 2005 expanded its product line to include motherboards.
