

EVGA Announces Classified SR-2 Motherboard

Brea, California and Munich, Germany - Tuesday, March 16, 2010 □

EVGA Corporation, the leading-edge 3D processor and motherboard manufacturer, announced the ultimate in high performance motherboards, the EVGA Classified SR-2. With dual Intel Xeon CPU support, 4-way SLI, overclocking features and more, this is certainly a one of a kind board. For the first time ever, you can experience the ultimate in CPU and GPU performance, and when combined with compatible Intel 6 Core CPU's, you create a massive system capable of up to 24 CPU threads of compute power.

Whether you are an extreme gamer, overclocker, power user, workstation user, server admin, folder/cruncher, or just a PC enthusiast; this is the ultimate board for you!

New and Key features introduced on the EVGA Classified SR-2 motherboard:

- 8+2 Phase PWM w/ switching frequency of up to 1,333KHz
- 100% Solid State Capacitors
- EVGA Vdroop Control
- EVGA Dummy OC
- EVGA E-LEET Tuning Utility
- EVGA EZ Voltage Read Points
- Onboard Clear CMOS, Power and Reset Buttons
- NVIDIA 4-Way SLI Support
- PCIe Disable Jumpers
- More Gold Content in CPU Pins
- EVGA ECP V3 Support
- EVGA EVbot Support

EVGA Classified SR2 motherboard will be available through EVGA's network of leading Etailers, Retailers, System Integrators, OEM System Manufacturers and Distributors.
