

Introducing the EVGA GE Series

- Wednesday, April 5, 2023 □

The EVGA GE Series brings EVGA ECO Mode to hard-line power supplies for the first time. In addition to 80 PLUS Gold efficiency, GE power supplies have low ripple and noise, low power consumption, and tight voltage regulation for unwavering stability. The EVGA GE series allows you to enjoy your PC in peace and quiet.

Absolute Silence with EVGA ECO Mode

The GE Series is EVGA's first non-modular unit with EVGA ECO mode to ensure the power supply stays completely silent during low to medium loads. The 120mm fan does not spin until necessary, allowing for completely silent operation.

80 Plus Gold Rated Efficiency

Among EVGA non-modular power supplies, the GE Series is the most efficient power supply under load, has the least amount of ripple and noise, and better load regulation than its predecessors.

Ready-to-go with Hard-Line Design

Designed to meet the needs of system builders and everyday gamers, the GE Series uses a Hard-Lined design with only the most commonly used and needed cables for ease of installation. Power that is ready to go right out of the box.

Essential Features

Reliable Japanese Capacitor - High-quality Japanese main capacitor ensures long-term reliability. DC to DC

Converter - Voltage step-down for rock-solid power stability and minimal signal noise. (For 3.3V and 5V)

Tight Voltage Regulation - A single +12V rail offers the best power output rail stability and compatibility. The EVGA GE series includes a full suite of protections (OCP, OVP, UVP, OPP, SCP, OTP) for safety and security.

World leading EVGA warranty and support for 5 years
