Measure Your Accuracy with X17 | X15 Supporting NVIDIA Reflex

EVGA X17 / X15 Gaming Mice now support the revolutionary NVIDIA Reflex Latency Analyzer, giving competitive gamers an accurate measurement of system latency for the first time.

NVIDIA Reflex Latency Analyzer is a revolutionary system latency measurement tool that detects clicks coming from Reflex Latency Analyzer compatible mice, EVGA X17 / X15, and then measures the time it takes for the resulting pixels (i.e. a gun muzzle flash) to change on NVIDIA® G-SYNC® Esports displays. PC performance for competitive gaming is about responsiveness—how quickly your display updates after mouse clicks or movements. This type of measurement has been virtually impossible for gamers to do before now, requiring over \$7000 in specialized high-speed cameras and equipment. Reflex Latency Analyzer provides a much more complete and accurate understanding of mouse, PC, and display performance. Now with Reflex Latency Analyzer, gamers can start a match with confidence, knowing their system is operating exactly as it should be. Learn more on how to use the Reflex Latency Analyzer.

For more information on NVIDIA Reflex and the Reflex Latency Analyzer check out [NVIDIA Reflex Home Page](#).

Measure your accuracy with NVIDIA REFLEX ANALYZER

With the EVGA X17 / X15 gaming mouse, EVGA GeForce RTX 30 Series graphics card, and compatible NVIDIA G-Sync monitor you can enable real-time latency measurement of a SINGLE MOUSE CLICK. [Learn more](#)
