Introducing the EVGA GeForce GTX 760!

- Tuesday, June 25, 2013 ☐ The EVGA GeForce GTX 760 is the new weapon of choice for gamers – a powerful graphics card that gives you the fast, smooth, quiet gaming you're looking for in all your favorite titles.

This series will also use EVGA's award winning cooler; the EVGA ACX Cooler. This double ball bearing design redefines traditional enthusiast coolers. Starting with a 40% increase in heatsink volume, the EVGA ACX is more efficient at dissipating heat, allowing for 15% lower GPU temperatures.

EVGA also spent time to ensure that even the fan blades were of the highest quality; with a 700% increase in strength, and 25% lower weight when compared to competitors dual fan designs. This makes the fans 20% more efficient by requiring lower power levels. Of course, EVGA is also using double ball bearing fans which offer a 12 year lifespan; this is 4X longer when compared to competitors!
