

EVGA Announces Classified SR-2 Power Supply

Brea, California - Tuesday, August 10, 2010 □

EVGA, in its pursuit to deliver only the best quality and performance, is at it again with the EVGA Classified SR-2 Power Supply. Delivering 1200 watts of continuous power while maintaining an 80 Plus Silver certification is only the beginning. 6 +12v rails capable of delivering 38A, and fine-tuning knobs allow you to adjust the +12v rail and fanspeed to the optimal performance.

This power supply is designed around the record shattering EVGA Classified SR-2 motherboard, but is perfectly suited to meet and exceed the needs of any motherboard and graphics card combination!

Continuous Power means this PSU is rated in continuous power; the steady power a PSU can output continuously, rather than the amount delivered at its short-lived peak. Also, Advanced Hybrid Cable Management combines traditional and modular PSU designs, and achieves low wire-transmission loss as well as better cable management for improved airflow. PowerCache means this PSU has a high-performance capacitor that delivers an extra power reserve when needed. And Extreme Voltage and Fan Tuning offers the ability to fine tune your +12v voltage and power supply cooling fan to suite any condition, whether you are pushing to the limits or just running silent.
